DETAILED ACTION

Election/Restrictions

1. Claims 7-20 withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 4/1/2005. Examiner has treated elected claims 1-6 on their merits as detailed in the proceeding action.

Oath/Declaration

2. Examiner notes applicants oath dated 3/11/2004. On page two (2) under "Prior Foreign Applications" applicant has checked the box, "Priority not claimed" when it appears that the applicant is in fact trying to claim priority of the March 2003 date.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Kung et al. (US 6,317,314). With respect to claim 1, Kung et al. teaches the use of an electronic apparatus comprising: a housing (As illustrated in Fig 1) having a mounting portion (20, 50); and a reinforcing plate (10) configured to reinforce the mounting portion, wherein

Art Unit: 2835

the reinforcing plate (10) has a frame (12) and coupling portions (111) surrounded by the frame, the coupling portions pass through a center of gravity of the reinforcing plate (The center of gravity of the reinforcing plate will pass through the coupling portions (111)) and a plurality of opening portions (112) are provided between the frame and the coupling portions.

With respect to claim 2, Kung et al. further teaches that the mounting portion (20, 50) includes a bottom wall (21) on which the input device is placed, the bottom wall has an inner surface located on an inner side of the housing (As illustrated in Fig 3), and the reinforcing plate (10) is stacked on the inner surface of the bottom wall.

With respect to claim 3, Kung et al. further teaches that the mounting portion includes a bottom wall (21) on which the input device is placed, the bottom wall has an opening portion (201) opening toward an inner side of the housing (As illustrated in Fig 3), and the reinforcing plate (10) is fitted in the opening portion (Via screws 30).

With respect to claim 4, Kung et al. further teaches that the opening portions (111) of the reinforcing plate are arranged radially from the center of gravity of the reinforcing plate (Openings 111 extend radially from the center of the X created by the peripheral portions 113).

With respect to claim 6, Kung et al. further teaches that the housing is formed of synthetic resin (Column 4, Lines 49-53) and the reinforcing plate is formed of metal (Column 3, Lines 66-67 – Column 4, Lines 1-2).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kung et al. in view of Kim (US 6,262,883). With respect to claim 5, Kung et al. fails to teach the use of a disk drive accommodated within the housing. Kim teaches a housing (19) accommodating a disk drive (30), a reinforcing plate (20a) is located to face the disk drive and a gap is provided between the reinforcing plate and the disk drive (Created by the bracket (40)). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the disk drive mounted within a housing as taught by Kim with the reinforcing plate and housing of Kung et al. to provide a means of mounting an auxiliary device in the housing without using any screws (Kim: Column 2, Lines 33-35). The use of an auxiliary device (disk drive) as taught by Kim further expands the capability of the computer system and housing of Kung et al.
